

## Customer Case Study Lift for Stadium

### The Problem

Bank One Ball Park in Phoenix, Arizona had a situation where they needed to access the playing field from the stands. There were cases where dignitaries, and even the anthem singers were in wheelchairs, and needed to come out of the stands and right onto the field. Bank One also had other areas in, and outside of the actual ball park where they wanted to be able to provide wheelchair access.

### Project Constraints:

- Nothing permanent could be installed that would interfere with the players dugouts or the actual playing field.
- The lift needed to be portable to provide access at various locations on the property
- The lift would have to roll easily on grass and on concrete
- The lift would have to function reliably in different types of weather, from extremely hot to cool and rainy.

### The Solution:

Adaptive provided a Mobilift CX portable wheelchair lift with a rough terrain option that provided larger wheels for rolling on rough or uneven surfaces.

### The Outcome

Bank One Ball Park was able to bring people onto the playing field from the stands with dignity, and then return them safely to their seat. The rough terrain option allowed the lift to be rolled across the turf to where it was required, and the standard wheels were great for rolling on concrete in other areas of the complex where the lift was needed. The manually powered lift did not rely on batteries or require a power source and therefore proved extremely reliable. It could always be counted on to perform, regardless of how long it had remained unused and regardless of the weather conditions. The lightweight construction (only 268 pounds) made it very easy to operate and move around the venue.

### Adaptive Wheelchair Lifts

Adaptive Engineering is a professional engineering company that has been engaged in the design and manufacture of accessibility products since 1973. The company's products are in operation across North America with some of the nation's largest corporations and institutions, and with many small local companies and institutions. Additional information on products and services can be found at [www.adaptivelifts.com](http://www.adaptivelifts.com).
